

Why GrafiCalc?

With GrafiCalc you can significantly improve your chances of developing higher quality products in less time than ever.

Following are key reasons that justify GrafiCalc on every engineer's desktop

1. GrafiCalc enables you to swiftly simulate and solve design challenges in the early stages of design when you have maximum questions and minimum information while conflicts are the easiest to detect and the least expensive to fix.
2. GrafiCalc enables you to leverage your existing expertise and investments in Microsoft Excel and CAD.
3. Solution modules created in any GrafiCalc version can be read and manipulated in all versions of GrafiCalc. This enables users to mix and match solution power to individual needs.
4. GrafiCalc users working in a group can share and reuse design knowledge without re-inventing the wheel every time.
5. GrafiCalc pays for itself many times over every time it is used.

"GrafiCalc is like the Swiss Army Knife for engineers"
